Dimension Data Australia

# Agenda

*What are we going to discuss today?*

**Overview of Business Intelligence**

**Microsoft Business Intelligence Technologies**

**Hands On Demonstrations of Microsoft Tools**

**Wrap Up and Summary**

# What is Business Intelligence (BI)?

*A definition of BI to get us all onto the same page*

**Business Intelligence (BI),**

in its most basic sense,  
is delivering

**meaningful, accurate, and timely information**

drawn from diverse sources  
to support

**an informed decision making process.**

*...and recent business trends indicate it must be...*

***flexible, fast, fun, collaborative and at all levels in a business.***

# Microsoft BI Solutions in the Marketplace

Where is Microsoft BI positioned?

- **Gartner Magic Quadrant (Jan 14)**
- **Microsoft are in the Leaders Quadrant**
- **Leaders Definition:**
  - *Vendors that are strong in breadth/depth of BI platform capabilities.*
  - *Can deliver on enterprise implementations that support a BI strategy.*
  - *They articulate a business proposition that fits with BI buyers, supported by capability to deliver on a global basis*

- \$15m+ in revenue
- 20+ Gartner client survey responses

# Agenda

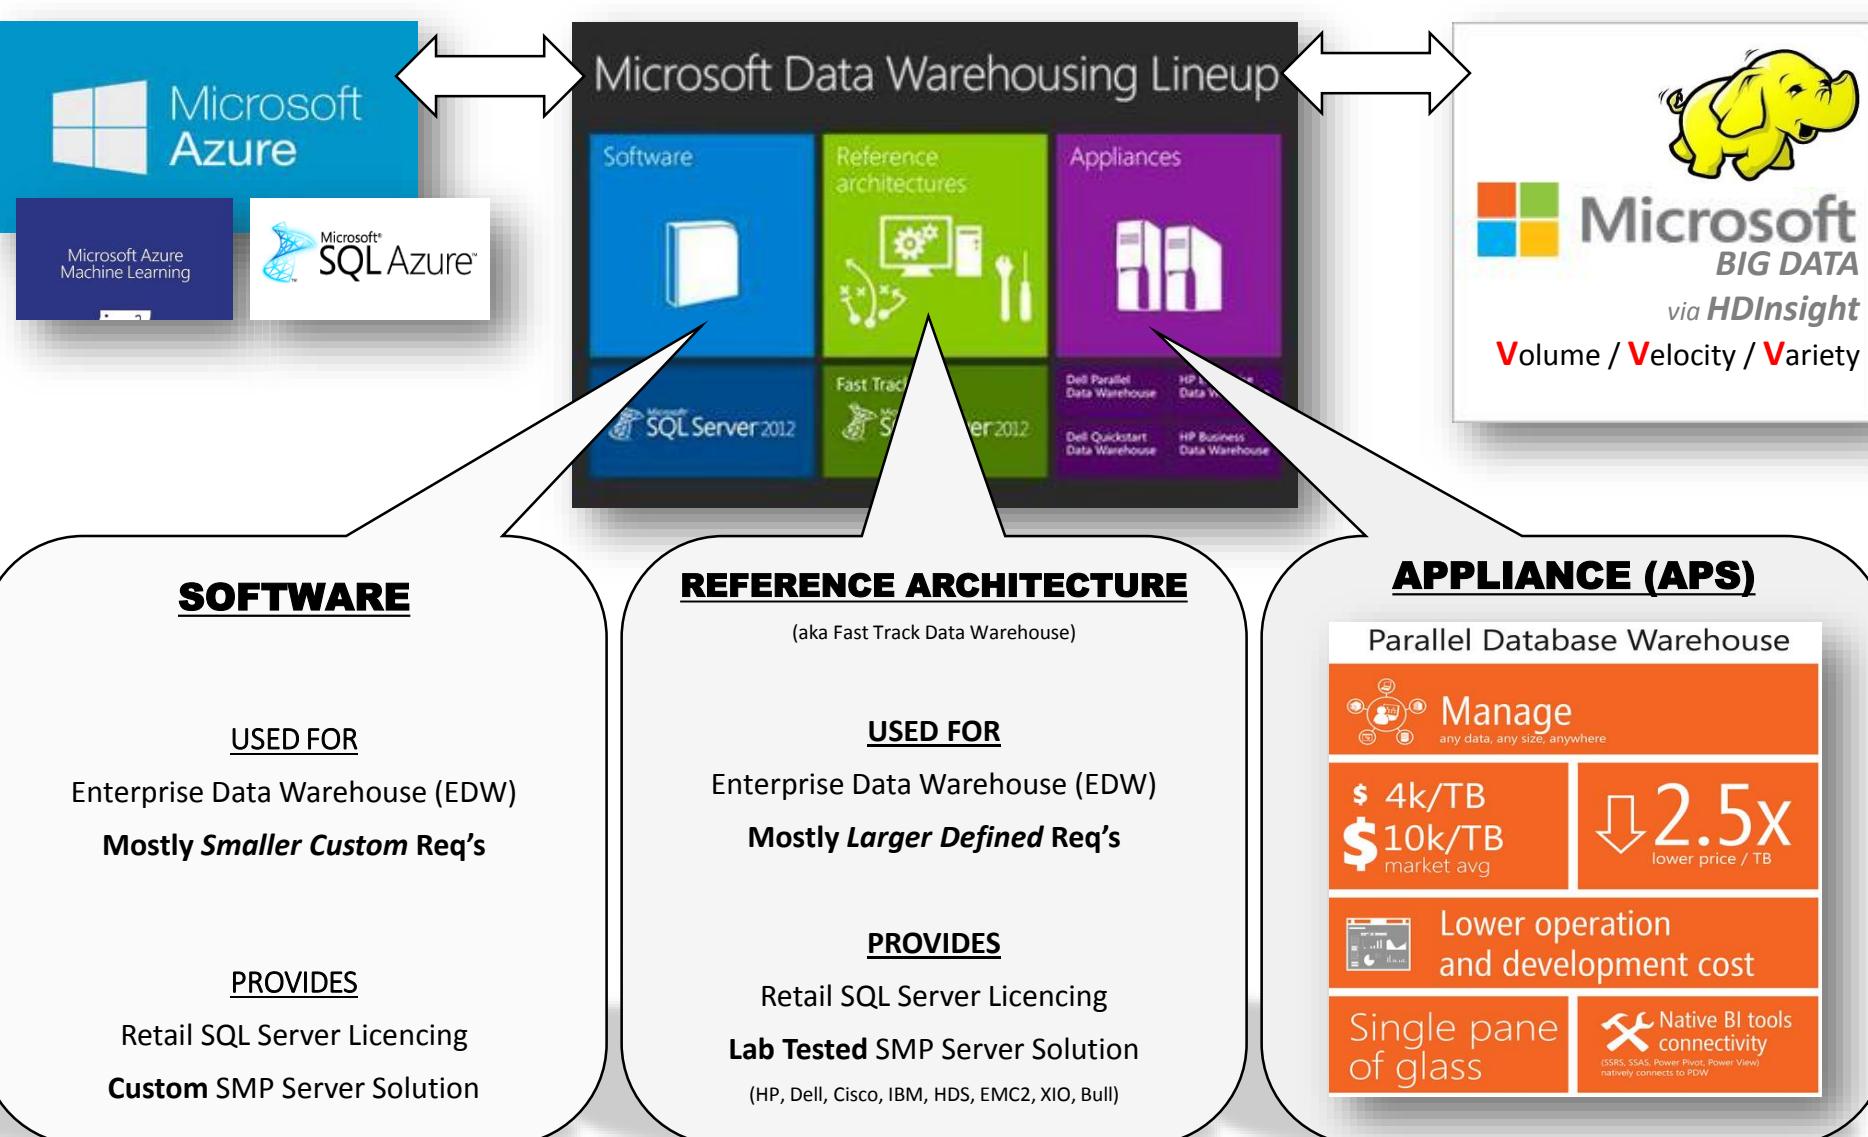

*What are we going to discuss today?*

**Overview of Business Intelligence**

**Microsoft Business Intelligence Technologies**

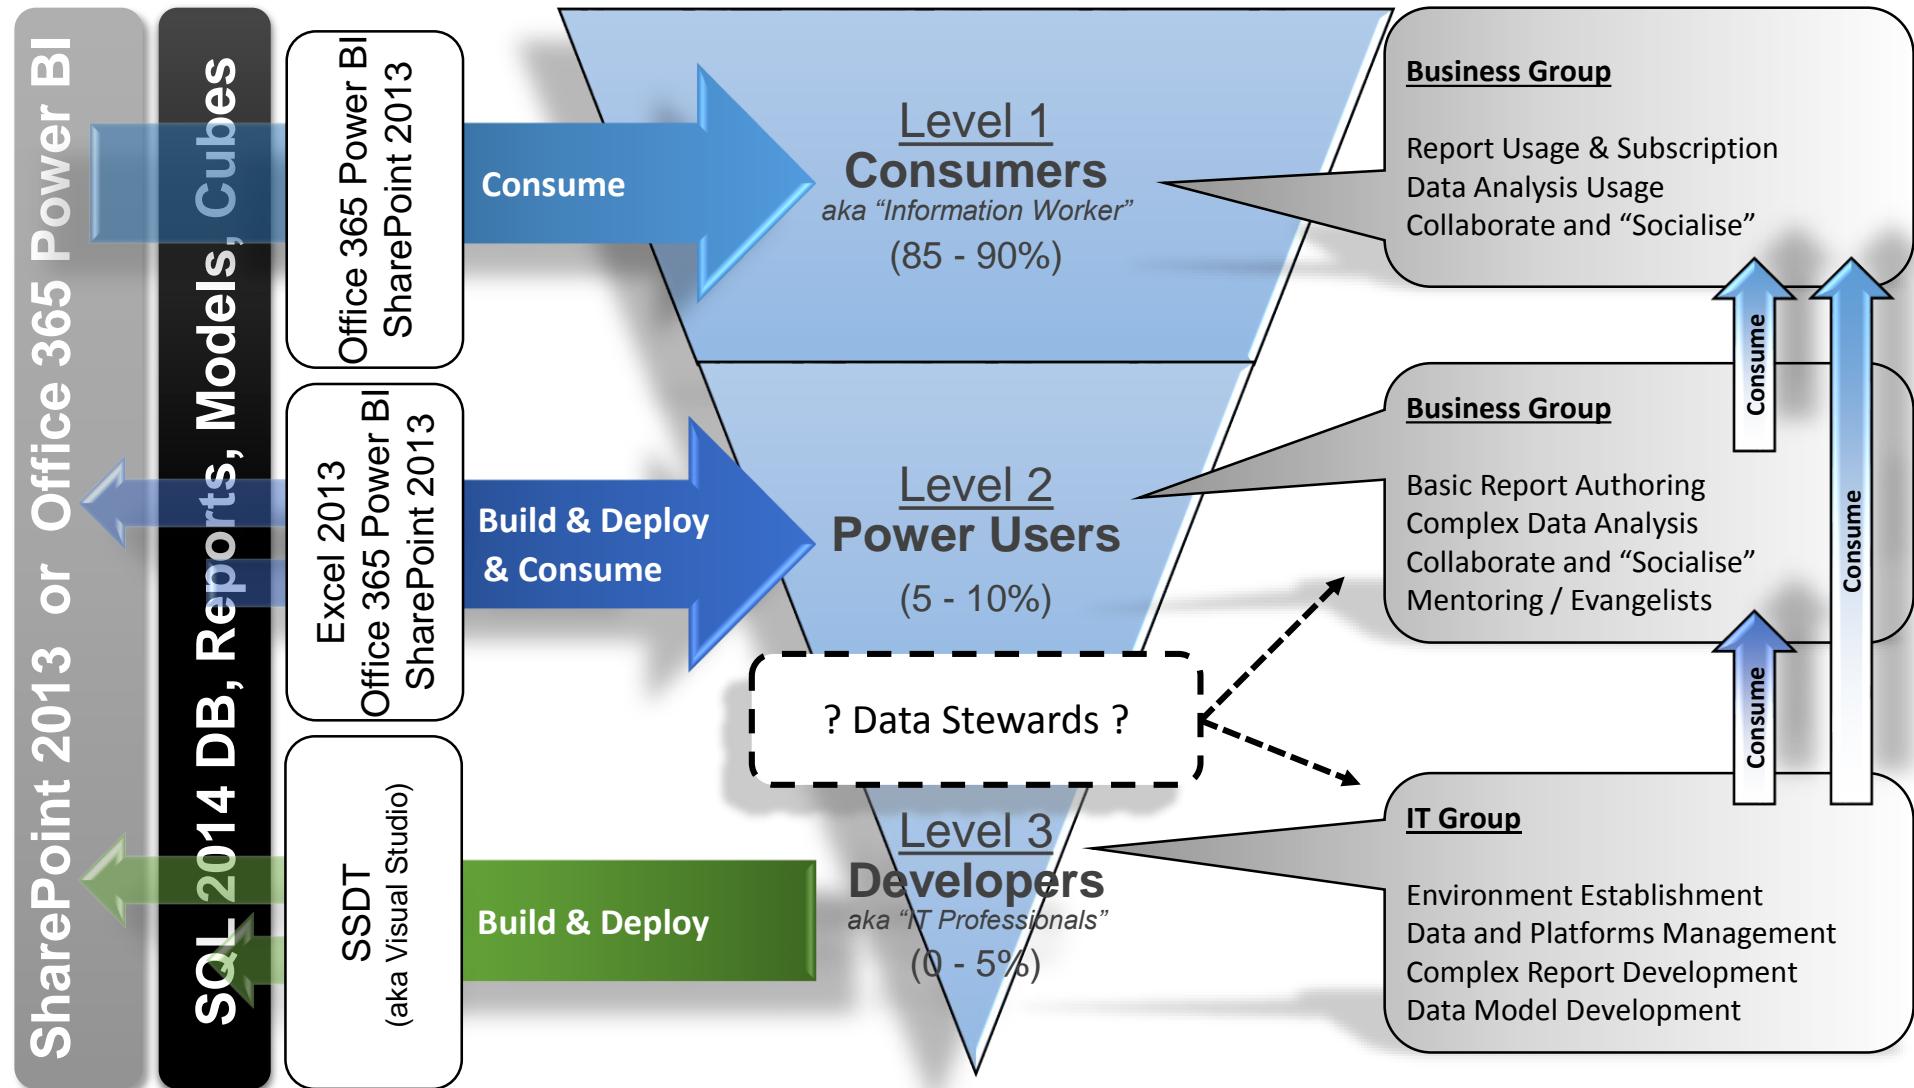

**Hands On Demonstrations of Microsoft Tools**

**Wrap Up and Summary**

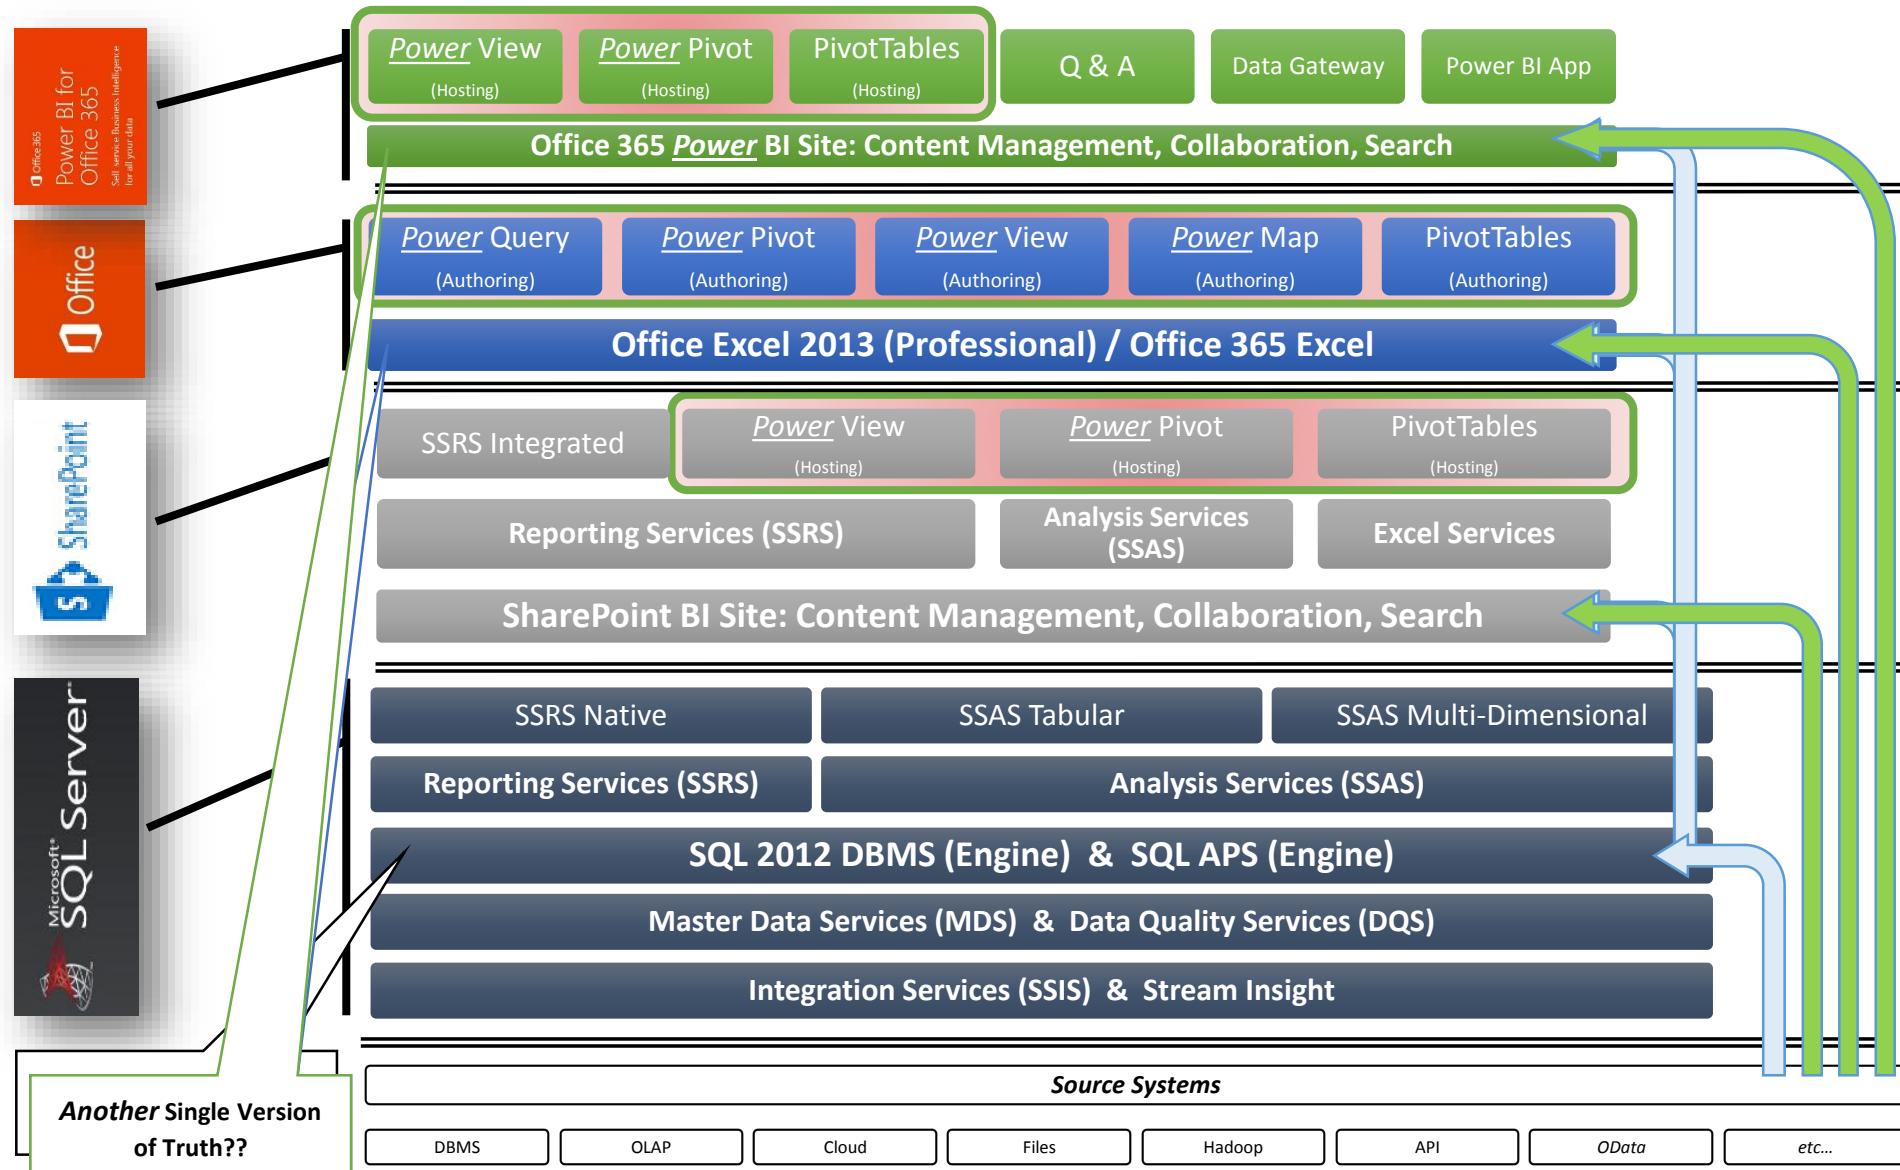

# Who are the Typical Users?

Who uses DW / BI solutions, and what do they do?

# Microsoft Core Products - Breakdown

What are the components of the Microsoft DW / BI offering?

So What Exactly is Power BI?

What are the Power BI products under Microsoft BI?

- **Power BI** is a **brand name** covering a **suite of Office 365 products**
- **Authoring: Excel Self Service BI Authoring for Power Users**
  1. **Power Query** (Data Discovery - Self Service SSIS / ETL)
  2. **Power Pivot** (Data Modelling - Self Service SSAS / Modelling)
  3. **Power View** (Visualisation Reporting - Self Service SSRS / Reporting)
  4. **Power Map** (Geospatial Reporting - Self Service SSRS / Reporting)
- **Sharing: Cloud-based** Server components for **hosting** BI content
  - **Power BI Site** for storing content
  - Natural Language Question and Answer (**Q & A**) feature for **Power BI** workbooks
  - **Data Management Gateway** to refresh cloud hosted **Power BI** workbook data
  - **Mobile BI App** functionality to access **Cloud-based Power BI** content

# Power BI – Excel Professional vs. Office 365

## What Power BI Products are in which Microsoft Product

- Where will I find the **Power BI** features I want to use?

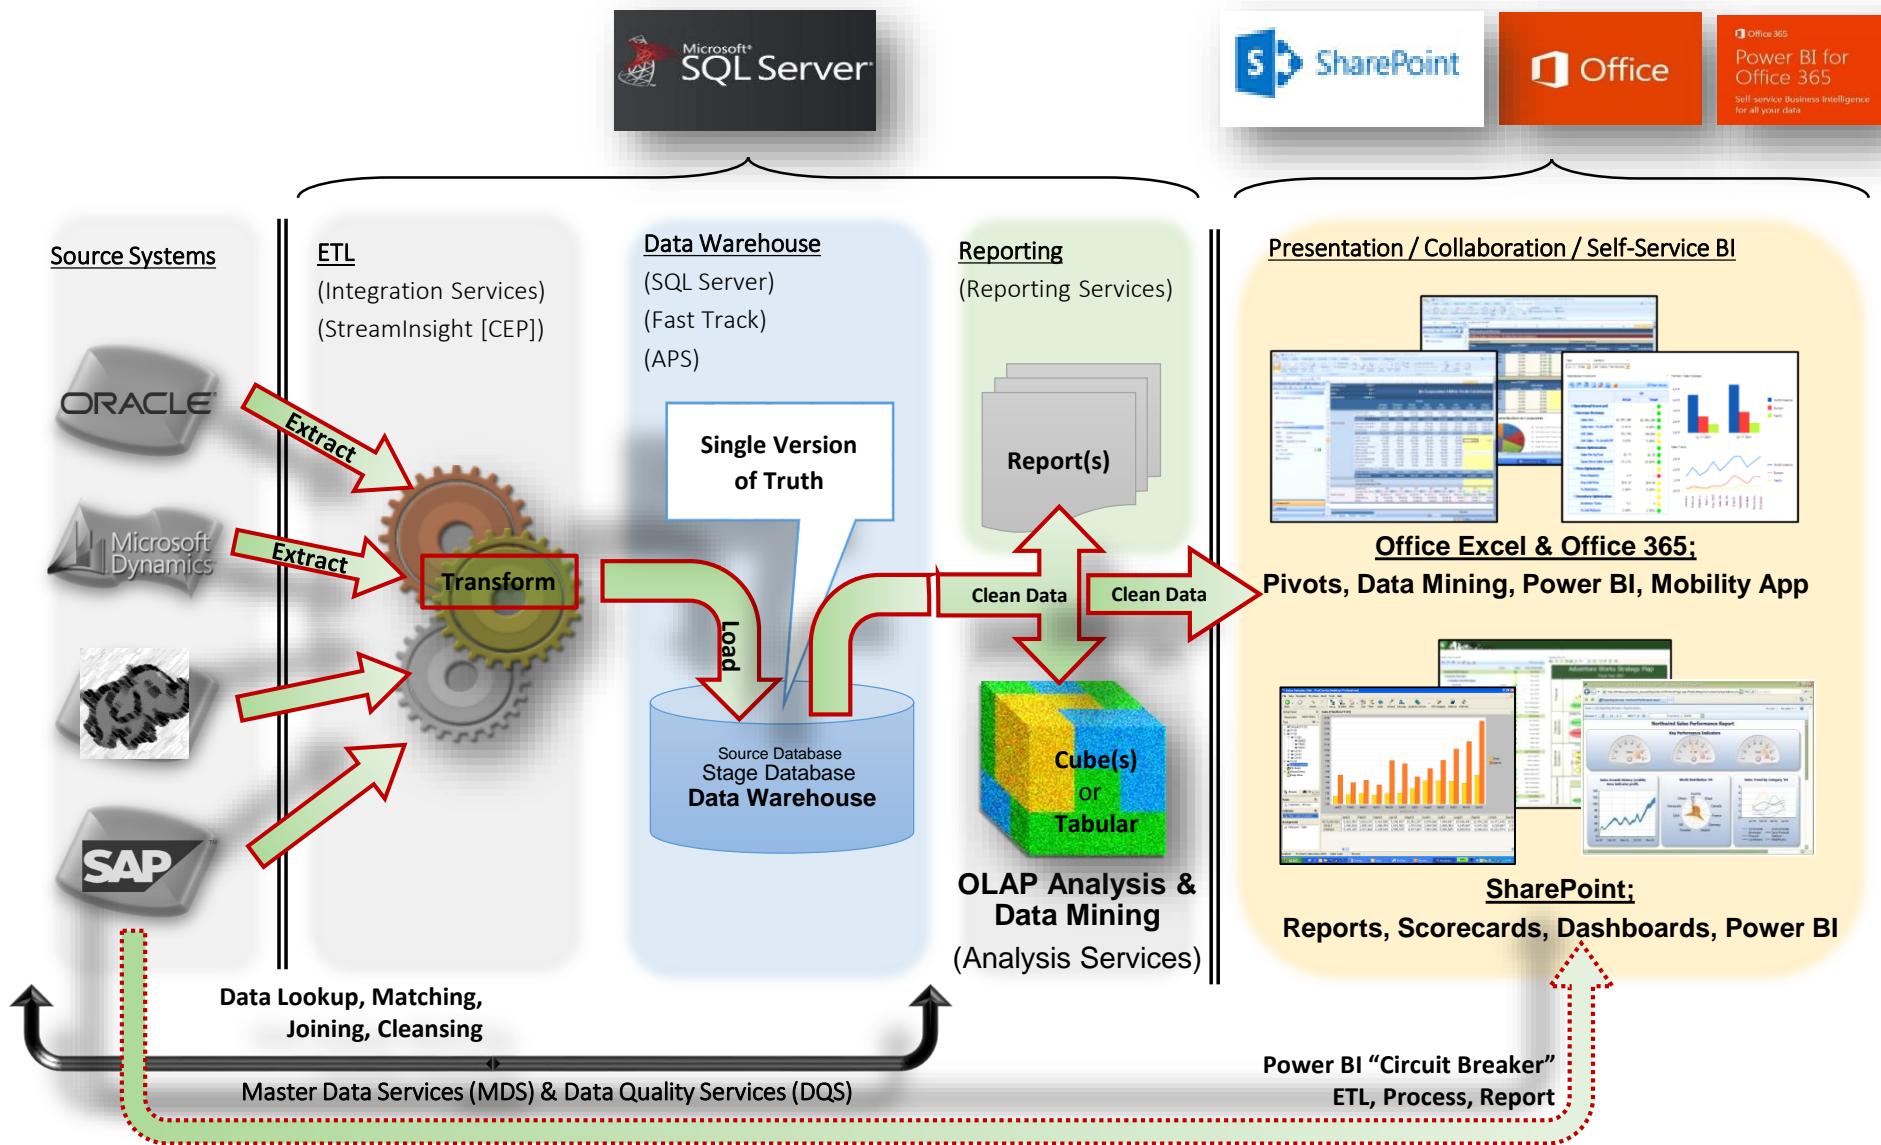

Power BI Product	Excel (Professional) On Prem	Office 365 (Subscription) Cloud	SharePoint (Enterprise) On Prem
Power Query	Yes	Yes	No
Power Pivot	Yes	Yes Office 365 (250MB limit)	Yes (requires SQL Enterprise)
Power View	Yes	Yes Office 365 (HTML5)	Yes
Power Map	Yes?	Yes Excel	No
BI Sites	No	Yes	Yes
Q&A	No	Yes	No
Data Management Gateway	No	Yes	No
Mobile Power BI App	No	Yes	No

Jun 2014 +  
Only in Preview.  
Full product in next Office version.

# Traditional “End-to-End” Enterprise Architecture

How are the Microsoft BI technologies deployed?

# Agenda

*What are we going to discuss today?*

**Overview of Business Intelligence**

**Microsoft Business Intelligence Technologies**

**Hands On Demonstrations of Microsoft Tools**

**Wrap Up and Summary**

# SharePoint Business Intelligence Portal / Site

*What is it, and how does it work?*

- **What is SharePoint?**

- A suite of **collaboration** based **portals** for managing business **content, security, workflows, processing and applications**
- SharePoint BI Portal (aka “**Insights**”) is a **pre-configured site** within SharePoint dedicated to the **specific deployment** and **hosting of BI related content**

- **What are the benefits of Sharepoint?**

- The BI Portal comes as part of a SharePoint licence (**Enterprise Cal**)
- **Very well** adopted within the industry
- Provides central “**launch pad**” to manage BI related **content** and **collaboration**

# Excel 2013 & SharePoint – Pivot Tables

*What is it, and how does it work?*

- Excel feature (**any version**), available for **free**
- Very **mature** and **established** feature of Excel
- Later Excel versions have very **advanced** Pivot Table functionality
- *So, what can you do with it?*
  1. “Slice and dice” data stored within Excel or SQL Analysis Services
  2. Create advanced data tables, charts, slicers and perform adhoc analytics on data sets
  3. Great for creating visual dashboards that can be loaded into SharePoint for viewing
- A **common** method of performing “**Self Service**” analytics on the **client desktop**
- Can deploy **workbooks** into SharePoint & O365 Power BI for **Collaboration**

# SharePoint – Reports & Report Builder (SSRS)

*What is it, and how does it work?*

- SQL Reporting Services **feature** available on **SSRS portal** or within **SharePoint**
- Comes free with a **valid licence** of SQL Server (Reporting Services)
- **Self-Service** tool pitched to the business **Power User** for creating reports
- *So, what can you do with it?*
  1. Fully featured GUI interface for creating Reporting Services reports
  2. Has several Wizard driven features to ease the creation of reporting content
  3. Test developed reports within GUI before deployment to SSRS or SharePoint Portal
- Similar in functionality to that of **Visual Studio (SSDT)** – but **not as advanced**
- A **common** method of performing “**Self Service**” Report Development on the **client desktop**

# Excel & SharePoint & O365 - Power View

*What is it, and how does it work?*

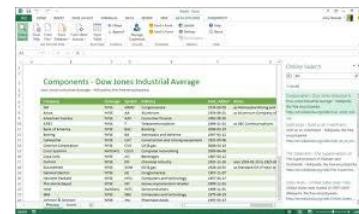

- Excel 2013 add-in, **natively installed with Excel**
- Also part of **SQL Server Reporting Services Add-In for SharePoint**
- **Power View in Excel or SharePoint** needs **Silverlight** on the **browsing machine**
- **Power View** can be integrated in **O365 Power BI** for sharing (can use **HTML5**)
- *So, what can you do with it?*
  - 1. **Visualise data** in very rich, interactive and flexible ways **within Excel (or SharePoint)**
  - 2. **Visualisations**; Column, bubble, time series, maps, tables, cards, slicers, filters... the list goes on
  - 3. **Data**; Tabular data (i.e. PowerPivot, SSAS Tabular) & Multi-Dimensional Data (i.e. SSAS MD)
  - 4. Impress your friends...
- Not as feature rich as Excel Charts (i.e. trendlines, dual axis, multi-chart areas, etc..)

*Supported Since...*

**SQL Server 2012 SP1 CU4**

# Excel - Power Query

*What is it, and how does it work?*

- Excel 2013 add-in, **free** to download, **free** to use

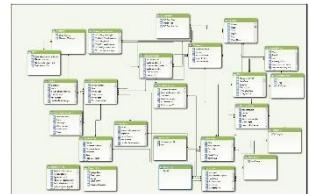

- *So, what can you do with it?*

**OData** is the web-based equivalent of ODBC, OLEDB, ADO.NET and JDBC

1. Discover, combine, cleanse, transform, refine, etc. *data for analysis within Excel*
  2. **Data**; Relational, Files, **OData**, Web, Hadoop, Azure Marketplace, Facebook, Active Directory, etc..
  3. Store **Extract Transform Load (ETL)** steps and easily, quickly and consistently **refresh** data
  4. Write **custom code** in the **Power Query Formula Language Specification** (called “M”)
- Can save queries into **Office 365 Power BI** site for sharing query content
  - Is a form of “**Self Service**” **Personal BI** and **Extract Transform Load (ETL)**

# Excel & SharePoint & O365 - Power Pivot

*What is it, and how does it work?*

- Excel 2013 add-in, **natively installed with Excel**
- An in-memory analytical engine designed for managing large scale data sets

***xVelocity Engine (Vertipaq)***

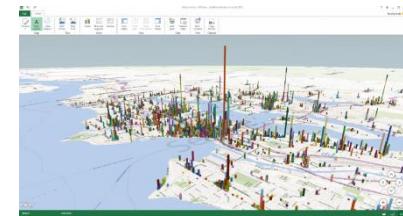

- *So, what can you do with it?*

*Same as SSAS Tabular Models  
and SQL Column Store Indexes*

1. Combine, cleanse, transform, refine, etc. data for analysis **within Excel**
  2. **Data**; Relational, Files, **OData**, Web, Hadoop, Azure Marketplace, etc.
  3. Write **custom code** in the **Power Pivot Formula Language Specification** (called “DAX”)
- Can be integrated within **SharePoint** and **O365 Power BI** for hosting Models
  - Is a form of “**Self Service**” **Personal Analysis Services**

# Excel - Power Map

*What is it, and how does it work?*

- Excel 2013 add-in, **free** to download, **free** to use

- *So, what can you do with it?*

1. Plot **geography data** visually (columns, heat, bubble) on a **Bing Maps** 3D world globe **within Excel**
2. Can also visualise **data over a timeline / timeframe** present within the data
3. **Data**; Tabular data within Excel (i.e. Tables, PowerPivot, etc.)
4. Impress your friends... **but unfortunately**

**No** custom spatial maps  
**No** export, distribution, etc.  
**No** SharePoint collaboration  
**No** O365 collaboration

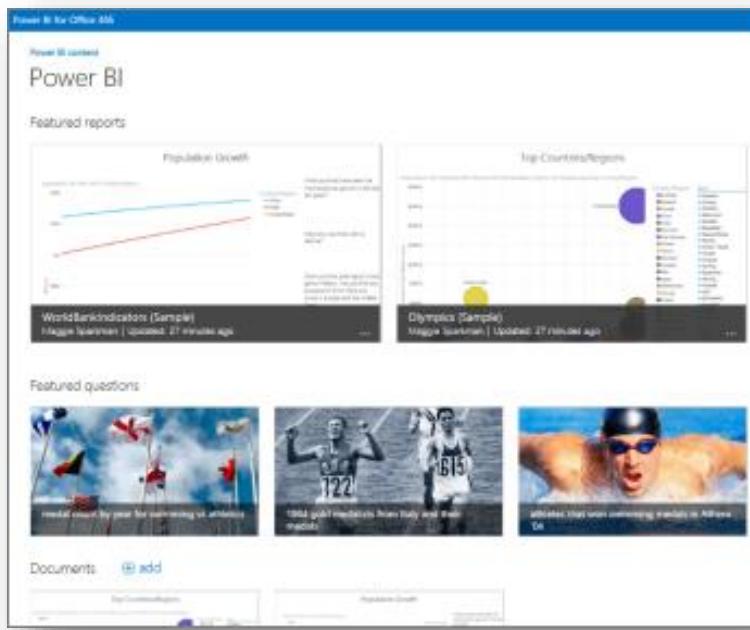

- Is no longer in preview, full version available under **Office 365** subscription **only**

# Power BI for Office 365

## Power BI Sites

- **Power BI Sites**

- The **Power BI sites application** *extends the SharePoint Online site*
- Provides a **robust & dynamic** location to share and find **Excel workbooks**
- Enables a **visual & interactive** view tailored specifically to **Power BI content**
- Essentially serves the **same purpose** as a BI Site on **SharePoint Enterprise**
- Is accessible via **client browser** or via **Power BI Mobile App**

The screenshot shows the Power BI SharePoint site. At the top, there's a navigation bar with 'Power BI content' and 'Power BI'. Below it, the 'Featured reports' section displays two cards: 'Population Unicef' (a line chart) and 'Olympics (Sample)' (a pie chart). Under 'Featured questions', there are three images: 'Olympic medals by year for winning vs. athletes' (showing a bar chart), 'Olympic gold medals from Italy and their medals' (showing a runner), and 'Athletes that won competing medals in Rio 2016' (showing a swimmer). At the bottom, there's a 'Documents' section with an 'add' button and a 'Recent' section.

# Power BI for Office 365

## Power BI Q&A

- **Power BI Q&A**

- Use **English natural language** to find answers in your own data
- Presents your answers in the form of **visualisations**
- As you type a **question** Power BI decides the **best visual** to display the **answer**
- The **visualisation changes dynamically** as you modify the **question**

The image displays three separate screenshots of the Power BI for Office 365 interface, illustrating how the tool generates different visualizations based on user input.

**Screenshot 1: List of host cities**

Query: "list the cities where the games have been held"  
Result: A table titled "Olympics (Sample).xlsx" showing host cities, years, and countries. The table includes rows for Amsterdam (1928), Antwerp (1920), Athens (1896), Atlanta (1996), Barcelona (1992), Beijing (2008), Berlin (1936), Helsinki (1952), London (1908), London (1948), London (2012), Los Angeles (1932), Los Angeles (1984), Melbourne / Stockholm (1956), Mexico (1968), Montreal (1976), Moscow (1980), Munich (1972), Paris (1900), Paris (1924), Rome (1960), Seoul (1988), Seoul (1988), St Louis (1904), and Stockholm (1912).

**Screenshot 2: Gold medal count by country in 2008**

Query: "number of gold medals by country in 2008"  
Result: A map titled "Medal Count by Country" showing the number of gold medals by country in 2008. The map uses blue circles of varying sizes to represent medal counts, with the largest circles appearing over North America and Europe.

**Screenshot 3: Medal count by sport for France and China**

Query: "Medal Count by sport for france and china as bar chart sorted by country"  
Result: A bar chart titled "Medal Count by Sport, and Country/Region" comparing medal counts for France (red bars) and China (blue bars) across various sports. The chart shows China leading in most sports, with France having significant counts in Fencing, Gymnastics, and Weightlifting.

# Agenda

*What are we going to discuss today?*

**Overview of Business Intelligence**

**Microsoft Business Intelligence Technologies**

**Hands On Demonstrations of Microsoft Tools**

**Wrap Up and Summary**

# When to use Power BI vs. Corporate BI?

What are the ideal deployment scenarios for Power BI?

- **MICROSOFT CORPORATE BI**

- Maximum Developmental Control Required (i.e. naming, formatting, etc)
- Maximum Data Control Required (i.e. **Single Version of Truth**)
- Large Data Volumes are expected
- Complex Data requirements (i.e. SCD [Type II], encryption, etc)
- Data Mining / Predictive Analytics Requirements
- Master Data & Data Quality Management
- Budget and **IT Expertise** already Exist

- **HYBRID Approach to Microsoft BI**
- Power BI can be used in its own right – or as an extension to Corporate BI
- Corporate BI for Large Data Sets and Maximum Design control
- Power BI to Business Users for leveraging **Corporate BI Data** (as SVOT)
- Power BI Sites for sharing content and collaboration
- Power BI Q & A via Cloud using **Corporate BI Data**
- Power BI Mobility Solution via Cloud

- Limited Budgets and/or IT Skills
- **Single Version of Truth** not important
- **Data Sovereignty** not important
- **Small Data Volumes** are expected
- **Natural Language** Queries via Q & A
- **BI Mobility** required (via HTML5)
- Good for **Prototypes** for **Corporate BI Solutions**

# Session Summary

*What have we discussed today?*

- ✓ **Provided a definition of Business Intelligence (BI)**
- ✓ **Discussed the Microsoft BI positioning, vision and offering**
- ✓ **Provided an overview of Microsoft BI component “Stack”**
- ✓ **Provided a typical architecture for an end-to-end MS BI solution**
- ✓ **Discussed how end-users interact with BI**
- ✓ **Demonstrated the functionality of “self-service” BI components**
- ✓ **Reviewed what is on the horizon for MS BI in the next SQL version**
